

Designing for Neurodiversity, Empathy, Human Centric Design and Inclusion in Software Applications

Vaishnavi Venkata Subramanian

Kachow!

Hello,
I'm Vaishnavi

Vancouver

Things I ❤️

Teaching

Public Speaking

Visual Communication

Things I do 🧐

Software Engineering

Ideation

Team collaboration

How to Give Me Feedback 🧐

Direct constructive feedback provided with utmost honesty to help me grow.
Data driven and candid conversations with potential solutions for me to thrive and succeed.

Comms Preferences 🧑

Working Patterns 🌞

- Morning Person
- Enjoy a quiet and vibrant environment
- Follow Pomodoro Technique 🍅

Things I struggle with 🧑

Mickey Mouse Job
#halfbaked

Yak Shaving

Interruptions

“Simple things should be simple,
complex things should be possible.” - Alan Kay

P.S: No animals or disney characters were harmed in the making of this manual 🐼 🐼 🐼

Agenda

What is Neurodiversity?

Accessibility vs ND

Guidelines for Design

Concluding Remarks

SOME DISABILITIES LOOK LIKE THIS

OTHERS LOOK LIKE THIS

NOT ALL DISABILITIES ARE VISIBLE

Source : <https://greatcareers.org/neurodiversity-in-the-workplace-and-international-day-of-persons-with-disabilities/>

Permanent Temporary Situational

Touch

One arm

Arm injury

New parent

See

Blind

Cataract

Distracted driver

Permanent Temporary Situational

Hear

Deaf

Ear infection

Bartender

Speak

Non-verbal

Laryngitis

Heavy accent

Kinds of Disability

Permanent disability

Never goes away and it affects a person's daily life

Temporary impairment

Eventually goes away

Situational impairment

Brief as once the situation changes, it goes away

Episodic impairment

Comes and goes at unpredictable times and lasts for different amounts of time

Assistive Technologies

THE CURB-CUT EFFECT

When we design for disabilities,
we make things better for everyone

“NOTHING ABOUT US WITHOUT US”

This is my way.

Create Abundance;
Not redundancy

Universal Design Foods (UDF)

Nursery to Nursing Homes

Category	Easy to chew	Can be chewed with gums	Can be broken down with tongue	Does not have to be chewed
Ability to chew	Somewhat difficult to eat hard or large pieces of food	Difficult to eat hard or large pieces of food	Can eat soft, small pieces of food	Cannot eat solid food, even if they are small pieces
Ability to swallow	Can swallow normally	Some foods are difficult to swallow	Beverages are sometimes difficult to swallow	Beverages are difficult to swallow
Softness (rice)	Between regular rice and soft rice 	Between soft rice and rice porridge 	Rice porridge 	Mashed rice porridge 
Softness (eggs)	Thick Japanese omelet 	Rolled Japanese omelet 	Scrambled eggs 	Soft steamed egg custard (no solid food ingredients)

Canary in the coalmine

Often the first to sense danger akin to canaries in the coal mine

Preventing miscommunication and not overwhelming the users

Guidelines

Guidelines

Interpretable messages :

Avoid use of characters that look alike

E.g. 1ll, B8, QO0CD, and break up long strings in phone numbers e.g. (000) 000–0000

Stick to active voice :

Passive voice sentences are longer and harder to comprehend.

Users with ADHD will get bored, dyslexics will have even more trouble reading, and so will readers on the spectrum.

Avoid metaphors :

Trouble understanding metaphors, such as idioms and other abstract figures of speech.

E.g. Instead of calling it a day, it's more inclusive to say that something is done.

Guidelines

Use emojis wisely :

Different languages have different interpretations. Custom and culture vary

Format your writing :

Divide large chunks of text into smaller paragraphs.

It is challenging for people struggling with limited attention spans.

Use descriptive buttons :

No vague microcopy, such as *Click here*. Think of screen readers

Describe the purpose of the button.

Example: *Upload images, Register, Download the e-book*.

This simple change makes navigation smoother and reduces anxiety.

Guidelines

Be careful with animations :

Too much stimulation can induce anxiety in people on the autism spectrum, which may even lead to physical pain, withdrawal, or meltdown.

Use of animated elements :

Should be limited to instances when it serves a purpose.
Also remember not to make them too invasive.

Mind the abbreviations :

AI in context

Artificial Intelligence vs Artificial Insemination

Guidelines

Avoid autoplay

Unexpected movement is surprising and scary, not to mention the sound!

Psstt I startle a lot!

Add subtitles and captions

Aim to visually please, rather than disturb.

Abstain from auto play in websites and music that suddenly appears out of nowhere.

Skip highly vibrant colors.

Perform user testing and focus groups with ND users.

Context is the king err queen

Think and Feel GILTY!

GILT : A word salad!

Globalization (G11N)

Internationalization (I18N)

Localization (L10N)

Translation (T9N)

Protanopia - Colour Blindness

Airport parking garage at PDX. Move slider to the left to see what Andy Baio sees.

Move slider to the left to see what Andy Baio sees. Image by PopSugar

Test in Grayscale. Mute the colors

Source : <https://www.theverge.com/23650428/colorblindness-design-ui-accessibility-wordle>

Designing for users on the autistic spectrum

Do...

use simple colours

write in plain English

Do this.

use simple sentences and bullets

make buttons descriptive

Attach files

build simple and consistent layouts

Don't...

use bright contrasting colours

use figures of speech and idioms

create a wall of text

make buttons vague and unpredictable

Click here!

build complex and cluttered layouts

Designing for users with dyslexia

Do...

use images and diagrams to support text

align text to the left and keep a consistent layout

consider producing materials in other formats (for example, audio or video)

keep content short, clear and simple

let users change the contrast between background and text

Don't...

use large blocks of heavy text

underline words, use italics or write in capitals

DON'T
DO THIS

force users to remember things from previous pages - give reminders and prompts

rely on accurate spelling - use autocorrect or provide suggestions

put too much information in one place

DIMINISHING VISUAL GLARE WHEN DESIGNING COURSE MATERIAL FOR

NEURO-DIVERGENT KIDS

Use a neutral colored background.

Employ lower intensity of black color.

Separate sections or bullets by colors.

Reduce the intensity of screen brightness.

Avoid neon or bright hues, use natural tones.

Use contrast to highlight call-to-action.

S/R (dB)

Aim for higher SNR

More useful information (the
signal) >>>>>>
unwanted data (the noise)

A design with inclusivity and neurodiversity in mind is not just 'nice to have' – it's imperative

Accessibility is more than a ramp

Designing for 'disability first' often
uncovers solutions that help everyone.

Great Minds Think
Unlike And Learn
Differently

Representation
Matters!

Thank you
